EDITOR

```
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.  
(amd64)  
3. The Docker daemon created a new container from that image which runs the  
executable that produces the output you are currently reading.  
4. The Docker daemon streamed that output to the Docker client, which sent it  
to your terminal.  
  
To try something more ambitious, you can run an Ubuntu container with:  
$ docker run -it ubuntu bash  
  
Share images, automate workflows, and more with a free Docker ID:  
https://hub.docker.com/  
  
For more examples and ideas, visit:  
https://docs.docker.com/get-started/  
  
[node1] (local) root@192.168.0.8 ~  
$
```

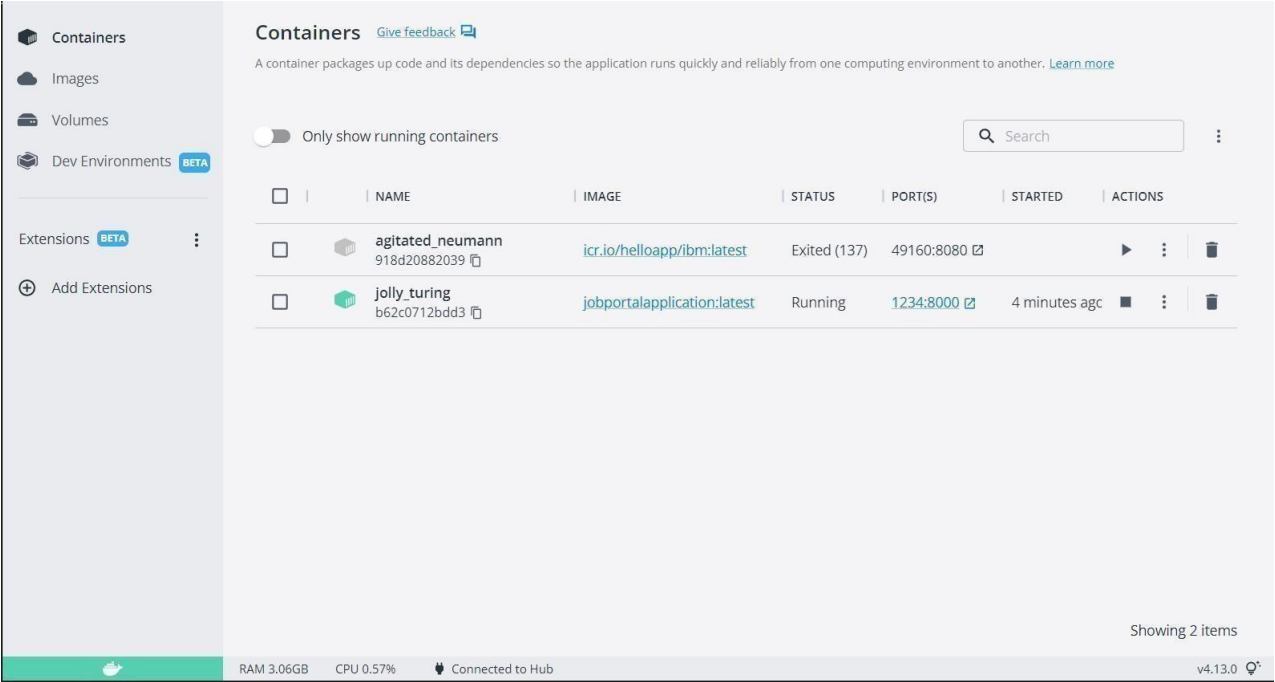

Activate Windows
Go to Settings to activate Windows.

2. Create a dockerfile for the job portal application and deploy it in Docker desktop application.

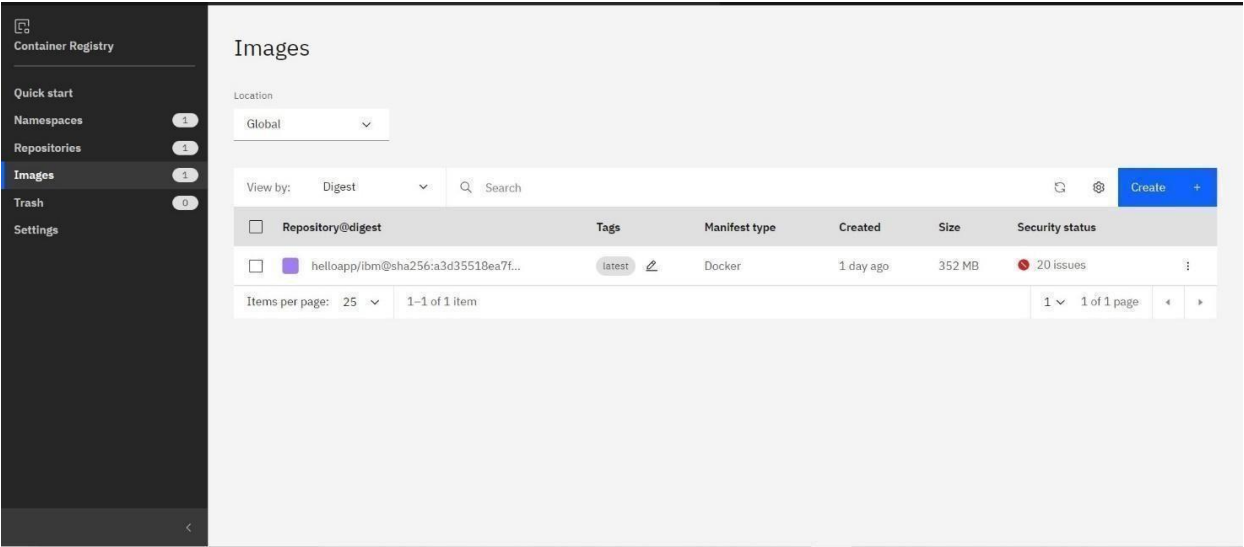

```
1 FROM python:3.8-buster
2
3 WORKDIR /app
4
5 COPY requirements.txt /app/
6
7 RUN pip install -r requirements.txt
8
9 COPY . /app/
10
11 RUN cp .env.dev.sample .env
12
13 EXPOSE 8000
14
15 RUN chmod +x entrypoint.sh
16
17 CMD ["sh", "entrypoint.sh"]
```

DOCKERFILE

DEPLOYMENT OF JOB PORTAL APPLICATION:

3. Create IBM container registry and deploy hello world app. IBM CONTAINER REGISTRY DEPLOYMENT:

OUTPUT:

4. Create a Kubernetes cluster in IBM Cloud and deploy a hello world image or a job portal image and also expose the same app to run in nodeport.

Creating a Kubernetes cluster in IBM Cloud and exposing a nodeport:
